DETAILED ACTION

This Office Action is in response to the Applicants' communication filed on 09/08/2006.
In virtue of this communication, claims 1-12 are currently presented in the instant application.

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

This Examiner's Amendment is made to solely include the related continuing data in the specification and correct the abstract in light of the information originally submitted by Applicants. It includes:

In the specification:

Page 1, between the "title" and "Technical Field",--This Application is a National Phase Application filed under 35 U.S.C. 371 claiming the benefit of PCT/JP05/04113 filed on 03/09/2005, which has the priority benefits of Japanese Applications Nos. JAPAN 2004-066820 filed on 03/10/2004 and JAPAN 2004-208744 filed on 07/15/2004.-- has been entered; and

In the Abstract:

The abstract submitted on 09/08/2006 has been replaced with the one shown in the WO 2005/088596 A1 as follows:

--A driver IC (4) and a current driver circuit (40) are shared by a first organic EL panel (2) and a second organic EL panel (3). Therefore, not like conventional cases, the current driving circuit (40) on a side not selected is not necessarily in a standby state, and power consumption

Art Unit: 2821

can be reduced. In a case where the first and second organic EL panels are passive matrix type, a first diode is provided between each column line of the first and the second organic EL panels and corresponding each terminal pin so as to prevent a reverse flow.--

Allowable Subject Matter

2. Claims 1-12 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

Prior art fails to disclose or fairly suggest an organic EL display device, which includes a first and second organic EL display panels, selects either one of the organic EL display panels according to a selection signal and drives the selected organic EL display panel to perform a predetermined display, comprising a reset circuit connected to the output pins for resetting terminal voltages of the organic EL display elements to a predetermined voltage in a reset period, and a first and second scan circuits provided correspondingly to the first and second organic EL display panels for scanning scan lines in a row direction or a vertical direction of the first and second organic EL panels, wherein one of the first and second scan circuits corresponding to one of the organic EL panels, which is to be driven, is operated in the reset period according to the selection signal and an operation of the other scan circuit is stopped or the scan operation of the other scan circuit itself is stopped for driving said one organic EL panel and ceasing the other organic EL panel, in combination with the remaining claimed limitations as called for in independent claim 1 (claims 2-12 are allowed as being dependent upon claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 2821

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of relevant prior art

4. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure:

Prior art Nakai et al. (U.S. Patent No. 7,330,163 B2) discloses an apparatus for driving a plurality of display units using common driving circuits; and

Prior art Kurashima et al. (U.S. Patent No. 6,954,184 B2) discloses an electronic apparatus comprising a plurality of display units.

Drawings

5. The drawings submitted on 09/08/2006 are accepted.
